The version of "AcadEditor" used in my tests was for Windows 7 x64 (2014) and Windows 8 x64 (2013). Try to use Windows 10 or later, and/or the 32-bit version of the setup executable. Why 64-bit? You need 64-bit for the installer to contain the specific versions of the dlls needed by the setup. The 64-bit build of the setup needs a 64-bit license key, or it can't upgrade the 32-bit version of the product. The 64-bit versions of the setup and the installed products will run on both 32-bit and 64-bit versions of Windows. The 32-bit versions are optimized for 32-bit machines, and don't have the functionality needed by the installers for 64-bit. The 64-bit version is optimized for 64-bit machines, and will run on 32-bit versions of Windows. Note that the 64-bit version of the setup has been available for Windows 7 since 2013. If you don't have the 64-bit versions of the setup or the product, go to the Microsoft Download page for Academic & Educational editions, and look under Advanced Options. You might be able to use the 32-bit version, with the -x86 command line option, and run the product and setup in 64-bit mode. Note that the 32-bit versions of the setup and the installed products will run on both 32-bit and 64-bit versions of Windows. Note that you need the 32-bit version of the setup and the 32-bit version of the product, as these versions are optimized for 32-bit. The 64-bit version of the setup has been available for Windows 7 since 2013. You need the 64-bit version of the setup and the 64-bit version of the product, as these versions are optimized for 64-bit. If you use a 32-bit version of Windows, and you need the 64-bit version of the setup and the 64-bit version of the product, you can't use the 32-bit version of the setup and the 32-bit version of the product. 64-bit machines run 32-bit operating systems and process instructions in 32-bit mode, and vice versa. 82157476af
